For: Reflector Providing Particularly High)
Reflectance in an Intended Viewing)
Angle and Reflection Type Liquid Crystal)
Display Device Using the Same)

PRELIMINARY AMENDMENT

Commissioner for Patents
Washington, D.C. 20231

Dear Sir:

Prior to examination of the above-identified application, please amend the application as follows:

In the Specification

Please rewrite the paragraph beginning on page 3, line 26 and ending on page 4, line 5 as follows:

(Amended) The conventional reflector 71 described above enables one to obtain relatively good reflectance over a relatively wide angle due to the concave portions. However, as β shown in the comparative example of FIG. 7 or FIG. 12, the relatively higher reflection intensity peaks at the reflection angles 15° and 45° , which appear symmetrical with the reflection angle 30° being an axis of symmetry.

Please rewrite the paragraph beginning on page 4, line 22 and ending on page 5, line 4 as follows:

(Amended) As seen in FIG. 17, directions in which a user usually looks at the display device 83 are concentrated in a range of the direction of the reflection light R_2
